

Function name	HBluetooth_vInit	
Arguments	Input	none
	Output	none
Return	none	
Description	This function is used to initialize bluetooth	

Function name	HBluetooth_vSendByte		
Arguments	Input	A_u8Byte	Data sent by bluetooth module
	Output	none	
Return	none		
Description	This function is used to send data via bluetooth		

Function name	HBluetooth_u8ReceiveByte	
Arguments	Input	none
	Output	none
Return	Recived data via bluetooth	
Description	This function is used to recive data via bluetooth	

Function name	HBluetooth_u8AsynchReceiveByte		
Arguments	Input	*Fptr	Pointer to the callback function
	Output	none	
Return	none		
Description	This function is used for Asyncrounus recived data		

Function name	HBluetooth_vSendString		
Arguments	Input	*A_ptrc8String	Pointer to the sent string
	Output	none	
Return	none		
Description	This function is used to send string		

Function name	Bluetooth_vReceiveString		
Arguments	Input	A_c8YourString[]	Pointer to the string to be recived
	Output	none	
Return	none		
Description	This function is used to recive string		

Function name	HBluetooth_u8CompStrings		
Arguments	Input	*String1	Pointer to the first string
		*String2	Pointer to the first string
	Output	none	
Return	none		
Description	Compares two strings using the bluetooth peripheral		

Function name	HBluetooth_vEnable	
Arguments	Input	none
	Output	none
Return	none	
Description	This function is used to enable bluetooth peripheral	

Function name	HBluetooth_vDisable	
Arguments	Input	none
	Output	none
Return	none	
Description	This function is used to Disable bluetooth peripheral	

Function name	HBluetooth_vEnableAsynchReceive	
Arguments	Input	none
	Output	none
Return	none	
Description	This function is used to Enable Asynchronization receiving mode	

Function name	HBluetooth_vDisableAsynchReceive	
Arguments	Input	none
	Output	none
Return	none	
Description	This function is used to Disable Asynchronization receiving mode
